(54) Title: ULTRAFINE L-CARNITINE, METHODS OF PREPARING THE SAME, COMPOSITIONS CONTAINING THE SAME, AND METHODS OF USING THE SAME

(57) Abstract: L-carnitine which has a particle size such that it substantially passes through a 100 USBS mesh sieve exhibits an increased bioavailability, a decreased hygroscopicity, and may be conveniently formulated with oil-based materials.

**Ultrafine L-carnitine, Methods of Preparing the Same, Compositions  
Containing the Same, and Methods Of Using the Same**

This application claims priority to U.S. Provisional Application 60/152,240  
filed on September 3, 1999, and U.S. Provisional Application 60/158,245 filed on  
5 October 8, 1999.

BACKGROUND OF THE INVENTION

Field of the Invention:

The present invention relates to an ultra-fine L-carnitine and salts thereof. In particular, the present invention relates to L-carnitine and salts thereof which exist in  
10 the form of ultra-fine particles. The present ultra-fine L-carnitine is capable of being uniformly blended with fine particles of other raw materials, while maintaining its own discrete shape. The overall fineness of the present ultra-fine L-carnitine makes it ideal for blending with oil-based raw materials with which conventional bulk carnitine is not entirely miscible. The overall fineness of the present ultra-fine L-  
15 carnitine also facilitates the ready absorption in the gut due to the increased overall surface area of the fine material. The present invention also relates to methods for preparing such ultra-fine L-carnitine and salts thereof. The present invention further relates to compositions which comprise such ultra-fine L-carnitine and salts thereof. The present invention additionally relates to methods of using such ultra-fine L-  
20 carnitine and salts thereof.

Description of the Background:

L-carnitine is known to have many uses. In particular, the oral administration of L-carnitine has been shown to be an effective therapy for cardiovascular diseases. L-carnitine and its salts are also known to be useful as dietary supplements, in  
25 particular for the facilitation of the metabolism of lipids.

However, it is desired to increase the bioavailability of L-Carnitine and its well known salts. It is also desired to prepare compositions which contain L-carnitine and one or more other ingredients with which bulk L-carnitine is not miscible, e.g.,

oil-based raw materials. It is further desired to reduce the hygroscopicity of L-carnitine.

Thus, there remains a need for forms of L-carnitine and salts thereof which exhibit increased bioavailability upon oral administration. There also remains a need  
5 for forms of L-carnitine and salts thereof which can be easily formulated with other ingredients with which bulk L-carnitine is not miscible, e.g., oil-based raw materials. There also remains a need for forms of L-carnitine and salts thereof which exhibit a decreased hygroscopicity.

### SUMMARY OF THE INVENTION

10 Accordingly, it is one object of the present invention to provide novel forms of L-carnitine and salts thereof which exhibit an increased bioavailability upon oral administration.

It is another object of the present invention to provide novel forms of L-carnitine and salts thereof which can be easily formulated with other ingredients with  
15 which bulk L-carnitine is not miscible, e.g., oil-based raw materials.

It is another object of the present invention to provide novel forms of L-carnitine and salts thereof which exhibit a reduced hygroscopicity.

It is another object of the present invention to provide novel methods of preparing such L-carnitine.

20 It is another object of the present invention to provide novel compositions which contain such L-carnitine.

It is another object of the present invention to provide novel methods of using such L-carnitine.

These and other objects, which will become apparent during the following  
25 detailed description, have been achieved by the inventors' discovery that L-carnitine and salts thereof which exist in the form of ultra-fine particles exhibit a high bioavailability upon oral administration. The inventors have also discovered that such L-carnitine may be conveniently formulated with oil-based raw materials. The inventors have also discovered that such L-carnitine exhibits a reduced  
30 hygroscopicity.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

Thus, in a first embodiment, the present invention provides ultra-fine L-carnitine and salts thereof. In the context of the present invention, the term L-carnitine and salts thereof includes not only L-carnitine itself, but also salts of L-carnitine, alkanoyl L-carnitines, and salts of alkanoyl L-carnitine. Suitable salts of L-carnitine include L-carnitine chloride, L-carnitine bromide, L-carnitine orotate, L-carnitine acid aspartate, L-carnitine acid phosphate, L-carnitine fumarate, L-carnitine lactate, L-carnitine maleate, L-carnitine acid maleate, L-carnitine acid oxalate, L-carnitine acid sulfate, L-carnitine glucose phosphate, L-carnitine tartrate, L-carnitine acid tartrate, L-carnitine iodate, L-carnitine aspartate, L-carnitine citrate, L-carnitine acid citrate, L-carnitine acid fumarate, L-carnitine glycerophosphate, L-carnitine mucate, L-carnitine orotate, L-carnitine oxalate, L-carnitine sulfate, L-carnitine trichloroacetate, L-carnitine trifluoroacetate, L-carnitine methanesulfonate, L-carnitine pamoate, and L-carnitine acid pamoate.

Suitable alkanoyl L-carnitines include C<sub>2-8</sub> alkanoyl L-carnitines, particularly acetyl, butyryl, isobutyryl, valeryl, isovaleryl and more particularly propionyl L-carnitine

Suitable salts of alkanoyl L-carnitines include C<sub>2-8</sub> alkanoyl L-carnitine chloride, C<sub>2-8</sub> alkanoyl L-carnitine bromide, C<sub>2-8</sub> alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-carnitine acid aspartate, C<sub>2-8</sub> alkanoyl L-carnitine acid phosphate, C<sub>2-8</sub> alkanoyl L-carnitine fumarate, C<sub>2-8</sub> alkanoyl L-carnitine lactate, C<sub>2-8</sub> alkanoyl L-carnitine maleate, C<sub>2-8</sub> alkanoyl L-carnitine acid maleate, C<sub>2-8</sub> alkanoyl L-carnitine acid oxalate, C<sub>2-8</sub> alkanoyl L-carnitine acid sulfate, C<sub>2-8</sub> alkanoyl L-carnitine glucose phosphate, C<sub>2-8</sub> alkanoyl L-carnitine tartrate, C<sub>2-8</sub> alkanoyl L-carnitine acid tartrate, C<sub>2-8</sub> alkanoyl L-carnitine iodate, C<sub>2-8</sub> alkanoyl L-carnitine aspartate, C<sub>2-8</sub> alkanoyl L-carnitine citrate, C<sub>2-8</sub> alkanoyl L-carnitine acid citrate, C<sub>2-8</sub> alkanoyl L-carnitine acid fumarate, C<sub>2-8</sub> alkanoyl L-carnitine glycerophosphate, C<sub>2-8</sub> alkanoyl L-carnitine mucate, C<sub>2-8</sub> alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-carnitine oxalate, C<sub>2-8</sub> alkanoyl L-carnitine sulfate, C<sub>2-8</sub> alkanoyl L-carnitine trichloroacetate, C<sub>2-8</sub> alkanoyl

L-carnitine trifluoroacetate, C<sub>2-8</sub> alkanoyl L-carnitine methanesulfonate, C<sub>2-8</sub> alkanoyl L-carnitine pamoate, and C<sub>2-8</sub> alkanoyl L-carnitine acid pamoate.

Thus, the present invention provides ultra-fine particles of L-carnitine, as well as ultra-fine particles of a salt of L-carnitine. The present invention also provides mixtures of ultra-fine particles of L-carnitine and ultra-fine particles of one or more salts of L-carnitine, as well as mixtures of ultra-fine particles of two or more salts of L-carnitine.

The ultra-fine L-carnitine and salts thereof of the present invention has a particle sufficiently small that substantially all of it passes through a 100 United State Bureau of Standards (USBS) mesh screen. In a preferred embodiment, the ultra-fine L-carnitine and salts thereof of the present invention has a particle sufficiently small that substantially all of it passes through a 150 USBS mesh screen. In a particularly preferred embodiment, the ultra-fine L-carnitine and salts thereof of the present invention has a particle sufficiently small that substantially all of it passes through a 200 USBS mesh screen.

The ultra-fine L-carnitine and salts thereof of the present invention may be prepared by reducing the size of conventional L-carnitine and salts thereof and selecting the appropriately sized particles by sieving. Currently, L-carnitine and salts thereof are conveniently prepared by the methods described in U.S. Patent Nos. 4,254,053; 4,602,039; and 5,412,113 and European Patent Application EP-A-0150688, which are incorporated herein by reference. Such procedures typically yield L-carnitine having a size of such that greater than 10 % by weight of the L-carnitine is retained by a 50 mesh sieve and more than 40 % by weight is retained by a 100 mesh sieve. The present ultra-fine L-carnitine may be produced by subjecting such L-carnitine to size reduction. The size reduction may be carried out by any suitable technique, such as grinding, milling, etc. Methods of size reduction are well known and are described in Kirk-Othmer, Encyclopedia of Chemical Technology, 4<sup>th</sup> Ed., Wiley, New York, vol. 22, pp. 279-296, 1999, which is incorporated herein by reference.

After the conventionally prepared L-carnitine has been subjected to size reduction, the ultra-fine L-carnitine of the present invention may be selected by

subjecting the size-reduced L-carnitine to sieving. Sieving is a well known technique for selecting materials of a particular size and is described in Kirk-Othmer, Encyclopedia of Chemical Technology, 4<sup>th</sup> Ed., Wiley, New York, vol. 22, pp. 256-278, 1999, which is incorporated herein by reference. The ultra-fine L-carnitine of the present invention is obtained by selecting that material which passes through a 100 USBS mesh sieve, preferably a 150 USBS mesh sieve, more preferably a 200 mesh USBS mesh sieve.

In another embodiment, the present invention provides compositions which contain the ultra-fine L-carnitine and a pharmaceutically acceptable excipient or carrier. Suitable pharmaceutically acceptable excipients or carriers are described in Remington's Pharmaceutical Sciences Handbook, Mack Publishing, which is incorporated herein by reference.

In a preferred embodiment, the pharmaceutically acceptable excipient or carrier is an oil-based material, such as synthetic or natural oil based vitamins including, but not limited to vitamin E, oils extracted from any seed or vegetable such as, but not limited to soy, olive, palm, or corn oil, and any nutritive substance that maybe previously dissolved suspended or mixed in one or more of such oils.

The present compositions will suitably contain the ultra-fine L-carnitine in an amount of 10 to 99 % by weight, preferably 25 to 95 % by weight, more preferably 50 to 90 % by weight, based on the total weight of the composition. The present composition may take the form of soft gelatin capsules, powders, pills, tablets, etc. In a preferred embodiment, the present composition is in the form of a gelatin capsule, pre-mix, sachet or reconstitutable sports drink mix.

The present composition may further comprise any of the additional active ingredients which L-carnitine or salts thereof are known to be combined with, e.g., hydroxycitric acid, Co-enzyme Q10, chromium picolinate, gamma linolenic acid, resveratrol, omega 3 acids, antioxidants, vitamins, etc.

In another embodiment, the present invention provides methods of treatment, therapy, and prevention involving orally administering to a subject in need of such treatment, therapy, or prevention, an effective amount of the ultra-fine L-carnitine or salt thereof of the present invention. Methods of treatment, therapy, and/or prevention

in which the ultra-fine L-carnitine of the present invention may be used are described in U.S. Patent Nos. 4,474,812 and 5,861,434, which are incorporated herein by reference.

The compound of the invention will have a minimum active principle of 57%,  
5 and still be capable of extended shelf life in combination formulations contained within soft gelatin capsules, pre-mixes, sachets and reconstitutable sports drink mixes. A transformer (a person or entity which will transform the present ultrafine L-carnitine into a finished product) will succeed in planned remote geographic markets for dry products that may be shipped and warehoused economically, then  
10 reconstituted locally, realizing a cost savings and increased opportunity for customers.

There are also peripheral benefits since the present ultra-fine L-carnitine and salts thereof are probably the best L-Carnitine source for combination formulations such as L-Carnitine and Co-enzyme Q10, due the similarity of particle sizes.

Ultra-fine L-carnitine fumarate and therefore the compound of the present  
15 invention has been shown to demonstrate an increased bioavailability through the mitochondrial pathway. This effect is substantiated with studies that show human plasma levels to equal those of conventionally sized L-carnitine tartrate for identical prior dosing. Transformers may therefore accomplish the target dosage using a reduced active bolus, an efficiency which translates to cost savings. In principle,  
20 consumers purchase nutritionals on a pure weight/volume (W/V) basis. The marketer who adds more active weight is judged as having a higher quality product.

The compound of the invention may be certified "BSE Safe," since it contains no animal products and is based upon chemical synthesis. Avoidance of potential health risks and unnecessary consumption of unknown organisms, since tartrate is a  
25 bioferm. "International Food Marketing," GreenPeace and others have published articles on the future risk of BSE. The buying public has a heightened awareness to this risk.

The compound of the present invention requires no reworking (regranulation, conditioning) as tartrate does. Lowered production costs, labor, environmental  
30 exposure. If transformer is not reworking tartrate, they should, since tablets made with tartrate as is will not hold up well in gelatine capsules or on shelves.

The fine particle size (200 Mesh) and coating of hydrophilic and or hydrophobic silicas provides excellent mixing and content uniformity properties especially for formulations that use other finely particled ingredients such as chromium picolinate and Co-enzyme Q10, as well as extended shelf life due to its  
5 inherently low hygroscopicity. Tooling (punches) and presses theoretically run cooler, than with tartrate, due to increased lubricity offered by the silica, which will save expensive downtime thereby reducing costs.

The present ultra-fine L-carnitine is particularly useful as a dietary supplement to ensure a healthy and balanced diet. It is also useful as a cofactor for weight control  
10 and as a dietary supplement for sport nutrition, vegetarian nutrition, animal nutrition. It is also useful in veterinary nutrition.

Other features of the invention will become apparent in the course of the following descriptions of exemplary embodiments which are given for illustration of the invention and are not intended to be limiting thereof.

15

### EXAMPLES

In the following examples, and throughout this specification, all parts and percentages are by weight, and all temperatures are in degrees Celsius, unless expressly stated to be otherwise. Where the solids content of a dispersion or solution is reported, it expresses the weight of solids based on the total weight of the  
20 dispersion or solution, respectively. Where a molecular weight is specified, it is the molecular weight range ascribed to the product by the commercial supplier, which is identified. Generally this is believed to be weight average molecular weight.

#### Example 1.

L-carnitine fumarate is milled to an over all particle size so as to minimally  
25 pass a number 100 USBS Mesh screen. Particles utilized to evaluate the efficacy of the invention to date have actually been milled to pass 150-200 Mesh with outstanding results. Particles are then blended with a food grade hydrophilic and/or hydrophobic fumed or precipitated silica(s) of the type available from Degussa, Inc.

that poses an overall surface area of 190-475 square meters per gram and a tapped density of 80-275 grams per liter.

Ultra-fine L-carnitine fumarate so prepared has the following analytical properties:

|    |                    |  |
|----|--------------------|--|
| 5  | Description:       | white crystalline powder                                 |
|    | Assay:             | 58.0% $\pm$ 2% carnitine<br>41.5% $\pm$ 1% fumaric acid  |
|    | Water content:     | $\leq$ 1% (Karl Fischer)                                 |
|    | Specific rotation: | $[\alpha]_D^{20} = 17.5^\circ \pm 1^\circ$ (1% in water) |
| 10 | pH:                | 3.0 to 4.0 (1% in water)                                 |
|    | Solubility:        | 5 g/100 ml in water                                      |
|    | Mesh size:         | Passes 150 mesh conditioned with fumed food grade silica |
| 15 | Toxicity:          | LD <sub>50</sub> (oral) > 8,000 mg/kg (rats)             |

Obviously, numerous modifications and variations of the present invention are possible in light of the above teachings. It is therefore to be understood that, within the scope of the appended claims, the invention may be practiced otherwise than as specifically described herein.

20 All patents and other references mentioned above are incorporated in full herein by this reference, the same as if set forth at length.

This application is based on U.S. Provisional Application 60/152,240 filed on September 3, 1999, and U.S. Provisional Application 60/158,245 filed on October 8, 1999, both of which are incorporated herein by reference in their entirety.

**Claims:**

1. L-carnitine, having a particle size such that it substantially passes through a 100 USBS mesh sieve.
2. The L-carnitine of Claim 1, which is selected from the group consisting of  
5 L-carnitine, salts of L-carnitine, alkanoyl L-carnitines, and salts of alkanoyl L-carnitine.
3. The L-carnitine of Claim 1, which is selected from the group consisting of  
L-carnitine chloride, L-carnitine bromide, L-carnitine orotate, L-carnitine acid  
aspartate, L-carnitine acid phosphate, L-carnitine fumarate, L-carnitine lactate, L-  
10 carnitine maleate, L-carnitine acid maleate, L-carnitine acid oxalate, L-carnitine acid  
sulfate, L-carnitine glucose phosphate, L-carnitine tartrate, L-carnitine acid tartrate, L-  
carnitine iodate, L-carnitine aspartate, L-carnitine citrate, L-carnitine acid citrate, L-  
carnitine acid fumarate, L-carnitine glycerophosphate, L-carnitine mucate, L-  
carnitine orotate, L-carnitine oxalate, L-carnitine sulfate, L-carnitine trichloroacetate,  
15 L-carnitine trifluoroacetate, L-carnitine methanesulfonate, L-carnitine pamoate, L-  
carnitine acid pamoate, C<sub>2-8</sub> alkanoyl L-carnitines, C<sub>2-8</sub> alkanoyl L-carnitine chloride,  
C<sub>2-8</sub> alkanoyl L-carnitine bromide, C<sub>2-8</sub> alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-  
carnitine acid aspartate, C<sub>2-8</sub> alkanoyl L-carnitine acid phosphate, C<sub>2-8</sub> alkanoyl L-  
carnitine fumarate, C<sub>2-8</sub> alkanoyl L-carnitine lactate, C<sub>2-8</sub> alkanoyl L-carnitine maleate,  
20 C<sub>2-8</sub> alkanoyl L-carnitine acid maleate, C<sub>2-8</sub> alkanoyl L-carnitine acid oxalate, C<sub>2-8</sub>  
alkanoyl L-carnitine acid sulfate, C<sub>2-8</sub> alkanoyl L-carnitine glucose phosphate, C<sub>2-8</sub>  
alkanoyl L-carnitine tartrate, C<sub>2-8</sub> alkanoyl L-carnitine acid tartrate, C<sub>2-8</sub> alkanoyl L-  
carnitine iodate, C<sub>2-8</sub> alkanoyl L-carnitine aspartate, C<sub>2-8</sub> alkanoyl L-carnitine citrate,  
C<sub>2-8</sub> alkanoyl L-carnitine acid citrate, C<sub>2-8</sub> alkanoyl L-carnitine acid fumarate, C<sub>2-8</sub>  
25 alkanoyl L-carnitine glycerophosphate, C<sub>2-8</sub> alkanoyl L-carnitine mucate, C<sub>2-8</sub>  
alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-carnitine oxalate, C<sub>2-8</sub> alkanoyl L-  
carnitine sulfate, C<sub>2-8</sub> alkanoyl L-carnitine trichloroacetate, C<sub>2-8</sub> alkanoyl L-carnitine  
trifluoroacetate, C<sub>2-8</sub> alkanoyl L-carnitine methanesulfonate, C<sub>2-8</sub> alkanoyl L-carnitine  
pamoate, and C<sub>2-8</sub> alkanoyl L-carnitine acid pamoate.

4. A method of preparing L-carnitine, having a particle size such that it substantially passes through a 100 USBS mesh sieve, comprising:

(1) subjecting L-carnitine having a particle size such that it does not pass through a 100 USBS mesh sieve to size reduction, to obtain size-reduced L-carnitine;  
5 and

(2) subjecting said size-reduced L-carnitine to sieving through a 100 USBS mesh sieve and selecting that portion which passes through said 100 USBS mesh sieve.

5. The method of Claim 4, wherein said L-carnitine is selected from the group consisting of L-carnitine, salts of L-carnitine, alkanoyl L-carnitines, and salts of alkanoyl L-carnitine.  
10

6. The method of Claim 4, wherein said L-carnitine is selected from the group consisting of L-carnitine chloride, L-carnitine bromide, L-carnitine orotate, L-carnitine acid aspartate, L-carnitine acid phosphate, L-carnitine fumarate, L-carnitine lactate, L-carnitine maleate, L-carnitine acid maleate, L-carnitine acid oxalate, L-carnitine acid sulfate, L-carnitine glucose phosphate, L-carnitine tartrate, L-carnitine acid tartrate, L-carnitine iodate, L-carnitine aspartate, L-carnitine citrate, L-carnitine acid citrate, L-carnitine acid fumarate, L-carnitine glycerophosphate, L-carnitine mucate, L-carnitine orotate, L-carnitine oxalate, L-carnitine sulfate, L-carnitine trichloroacetate, L-carnitine trifluoroacetate, L-carnitine methanesulfonate, L-carnitine pamoate, L-carnitine acid pamoate, C<sub>2-8</sub> alkanoyl L-carnitines, C<sub>2-8</sub> alkanoyl L-carnitine chloride, C<sub>2-8</sub> alkanoyl L-carnitine bromide, C<sub>2-8</sub> alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-carnitine acid aspartate, C<sub>2-8</sub> alkanoyl L-carnitine acid phosphate, C<sub>2-8</sub> alkanoyl L-carnitine fumarate, C<sub>2-8</sub> alkanoyl L-carnitine lactate, C<sub>2-8</sub> alkanoyl L-carnitine maleate, C<sub>2-8</sub> alkanoyl L-carnitine acid maleate, C<sub>2-8</sub> alkanoyl L-carnitine acid oxalate, C<sub>2-8</sub> alkanoyl L-carnitine acid sulfate, C<sub>2-8</sub> alkanoyl L-carnitine glucose phosphate, C<sub>2-8</sub> alkanoyl L-carnitine tartrate, C<sub>2-8</sub> alkanoyl L-carnitine acid tartrate, C<sub>2-8</sub> alkanoyl L-carnitine iodate, C<sub>2-8</sub> alkanoyl L-carnitine aspartate, C<sub>2-8</sub> alkanoyl L-carnitine citrate, C<sub>2-8</sub> alkanoyl L-carnitine acid citrate, C<sub>2-8</sub> alkanoyl L-carnitine acid fumarate, C<sub>2-8</sub> alkanoyl L-carnitine glycerophosphate, C<sub>2-8</sub> alkanoyl L-carnitine mucate, C<sub>2-8</sub> alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-carnitine oxalate,  
20  
25  
30

C<sub>2-8</sub> alkanoyl L-carnitine sulfate, C<sub>2-8</sub> alkanoyl L-carnitine trichloroacetate, C<sub>2-8</sub> alkanoyl L-carnitine trifluoroacetate, C<sub>2-8</sub> alkanoyl L-carnitine methanesulfonate, C<sub>2-8</sub> alkanoyl L-carnitine pamoate, and C<sub>2-8</sub> alkanoyl L-carnitine acid pamoate.

7. A composition, comprising:

5 (A) L-carnitine having a particle size such that it substantially passes through a 100 USBS mesh sieve; and

(B) a pharmaceutically acceptable excipient or carrier.

8. The composition of Claim 7, wherein said L-carnitine is selected from the group consisting of L-carnitine, salts of L-carnitine, alkanoyl L-carnitines, and salts of  
10 alkanoyl L-carnitine.

9. The composition of Claim 7, wherein said L-carnitine is selected from the group consisting of L-carnitine chloride, L-carnitine bromide, L-carnitine orotate, L-carnitine acid aspartate, L-carnitine acid phosphate, L-carnitine fumarate, L-carnitine lactate, L-carnitine maleate, L-carnitine acid maleate, L-carnitine acid oxalate, L-carnitine acid sulfate, L-carnitine glucose phosphate, L-carnitine tartrate, L-carnitine acid tartrate, L-carnitine iodate, L-carnitine aspartate, L-carnitine citrate, L-carnitine acid citrate, L-carnitine acid fumarate, L-carnitine glycerophosphate, L-carnitine mucate, L-carnitine orotate, L-carnitine oxalate, L-carnitine sulfate, L-carnitine trichloroacetate, L-carnitine trifluoroacetate, L-carnitine methanesulfonate, L-carnitine pamoate, L-carnitine acid pamoate, C<sub>2-8</sub> alkanoyl L-carnitines, C<sub>2-8</sub> alkanoyl L-carnitine chloride, C<sub>2-8</sub> alkanoyl L-carnitine bromide, C<sub>2-8</sub> alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-carnitine acid aspartate, C<sub>2-8</sub> alkanoyl L-carnitine acid phosphate, C<sub>2-8</sub> alkanoyl L-carnitine fumarate, C<sub>2-8</sub> alkanoyl L-carnitine lactate, C<sub>2-8</sub> alkanoyl L-carnitine maleate, C<sub>2-8</sub> alkanoyl L-carnitine acid maleate, C<sub>2-8</sub> alkanoyl L-carnitine acid oxalate, C<sub>2-8</sub> alkanoyl L-carnitine acid sulfate, C<sub>2-8</sub> alkanoyl L-carnitine glucose phosphate, C<sub>2-8</sub> alkanoyl L-carnitine tartrate, C<sub>2-8</sub> alkanoyl L-carnitine acid tartrate, C<sub>2-8</sub> alkanoyl L-carnitine iodate, C<sub>2-8</sub> alkanoyl L-carnitine aspartate, C<sub>2-8</sub> alkanoyl L-carnitine citrate, C<sub>2-8</sub> alkanoyl L-carnitine acid citrate, C<sub>2-8</sub> alkanoyl L-carnitine acid fumarate, C<sub>2-8</sub> alkanoyl L-carnitine glycerophosphate, C<sub>2-8</sub> alkanoyl L-carnitine mucate, C<sub>2-8</sub> alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-carnitine oxalate, C<sub>2-8</sub> alkanoyl L-carnitine sulfate, C<sub>2-8</sub> alkanoyl L-carnitine trichloroacetate, C<sub>2-8</sub>

15  
20  
25  
30

alkanoyl L-carnitine trifluoroacetate, C<sub>2-8</sub> alkanoyl L-carnitine methanesulfonate, C<sub>2-8</sub> alkanoyl L-carnitine pamoate, and C<sub>2-8</sub> alkanoyl L-carnitine acid pamoate.

10. The composition of Claim 7, which is suitable for oral ingestion.

11. The composition of Claim 7, which further comprises hydroxycitric acid,  
5 Co-enzyme Q10, chromium picolinate, gamma linolenic acid, resveratrol, omega 3 acids, an antioxidant, or a vitamin.

12. In a method of treatment, therapy, or prevention, comprising orally administering an effective amount of L-carnitine to a subject in need thereof, the improvement being said L-carnitine has a particle size such that it substantially passes  
10 through a 100 USBS mesh sieve.

13. The method of Claim 12, wherein said L-carnitine is selected from the group consisting of L-carnitine, salts of L-carnitine, alkanoyl L-carnitines, and salts of alkanoyl L-carnitine.

14. The method of Claim 12, wherein said L-carnitine is selected from the  
15 group consisting of L-carnitine chloride, L-carnitine bromide, L-carnitine orotate, L-carnitine acid aspartate, L-carnitine acid phosphate, L-carnitine fumarate, L-carnitine lactate, L-carnitine maleate, L-carnitine acid maleate, L-carnitine acid oxalate, L-carnitine acid sulfate, L-carnitine glucose phosphate, L-carnitine tartrate, L-carnitine acid tartrate, L-carnitine iodate, L-carnitine aspartate, L-carnitine citrate, L-carnitine  
20 acid citrate, L-carnitine acid fumarate, L-carnitine glycerophosphate, L-carnitine mucate, L-carnitine orotate, L-carnitine oxalate, L-carnitine sulfate, L-carnitine trichloroacetate, L-carnitine trifluoroacetate, L-carnitine methanesulfonate, L-carnitine pamoate, L-carnitine acid pamoate, C<sub>2-8</sub> alkanoyl L-carnitines, C<sub>2-8</sub> alkanoyl L-carnitine chloride, C<sub>2-8</sub> alkanoyl L-carnitine bromide, C<sub>2-8</sub> alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-carnitine acid aspartate, C<sub>2-8</sub> alkanoyl L-carnitine acid  
25 phosphate, C<sub>2-8</sub> alkanoyl L-carnitine fumarate, C<sub>2-8</sub> alkanoyl L-carnitine lactate, C<sub>2-8</sub> alkanoyl L-carnitine maleate, C<sub>2-8</sub> alkanoyl L-carnitine acid maleate, C<sub>2-8</sub> alkanoyl L-carnitine acid oxalate, C<sub>2-8</sub> alkanoyl L-carnitine acid sulfate, C<sub>2-8</sub> alkanoyl L-carnitine glucose phosphate, C<sub>2-8</sub> alkanoyl L-carnitine tartrate, C<sub>2-8</sub> alkanoyl L-carnitine acid tartrate, C<sub>2-8</sub> alkanoyl L-carnitine iodate, C<sub>2-8</sub> alkanoyl L-carnitine aspartate, C<sub>2-8</sub> alkanoyl L-carnitine citrate, C<sub>2-8</sub> alkanoyl L-carnitine acid citrate, C<sub>2-8</sub> alkanoyl L-

carnitine acid fumarate, C<sub>2-8</sub> alkanoyl L-carnitine glycerophosphate, C<sub>2-8</sub> alkanoyl L-carnitine mucate, C<sub>2-8</sub> alkanoyl L-carnitine orotate, C<sub>2-8</sub> alkanoyl L-carnitine oxalate, C<sub>2-8</sub> alkanoyl L-carnitine sulfate, C<sub>2-8</sub> alkanoyl L-carnitine trichloroacetate, C<sub>2-8</sub> alkanoyl L-carnitine trifluoroacetate, C<sub>2-8</sub> alkanoyl L-carnitine methanesulfonate, C<sub>2-8</sub> alkanoyl L-carnitine pamoate, and C<sub>2-8</sub> alkanoyl L-carnitine acid pamoate.

## INTERNATIONAL SEARCH REPORT

International application No.  
PCT/US00/24279

## A. CLASSIFICATION OF SUBJECT MATTER

IPC(7) : A61K 31/205

US CL : 514/556

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

U.S. : 514/556

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

| Category* | Citation of document, with indication, where appropriate, of the relevant passages | Relevant to claim No. |
|-----------|--|-----------------------|
| A         | US 4,254,053 A (DEWITT et al.) 03 March 1981, (03.03.81), see the entire document. | 1-14                  |
| A         | US 4,602,039 A (CAVAZZA) 22 July 1986 (22.07.86), see the entire document.         | 1-14                  |
| A         | US 5,412,113 A (GIANNESI et al.) 02 May 1995 (02.05.95), see the entire document.  | 1-14                  |

☐ Further documents are listed in the continuation of Box C. ☐ See patent family annex.

|   |  |
|---|--|
| * Special categories of cited documents:  | *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention  |
| *A* document defining the general state of the art which is not considered to be of particular relevance  | *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone   |
| *E* earlier document published on or after the international filing date  | *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art |
| *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified) | *Z* document member of the same patent family  |
| *O* document referring to an oral disclosure, use, exhibition or other means  |  |
| *P* document published prior to the international filing date but later than the priority date claimed  |  |

Date of the actual completion of the international search

14 OCTOBER 2000

Date of mailing of the international search report

20 NOV 2000

Name and mailing address of the ISA/US  
Commissioner of Patents and Trademarks
